

# Fiber Force™

FiberForce™ is reinforced, recycled plastic lumber made of high-density polyethylene plastic combined with fiberglass. Compared with standard plastic lumber, it has increased structural ability and is a great choice for projects that require more structural integrity. A FiberForce™ 2" nominal thickness will span 24" on center.

FiberForce™ is low maintenance and does not require painting or staining. FiberForce™ will not rot and is resistant to oils, chemicals, saltwater, termites, marine borers, and fungi.

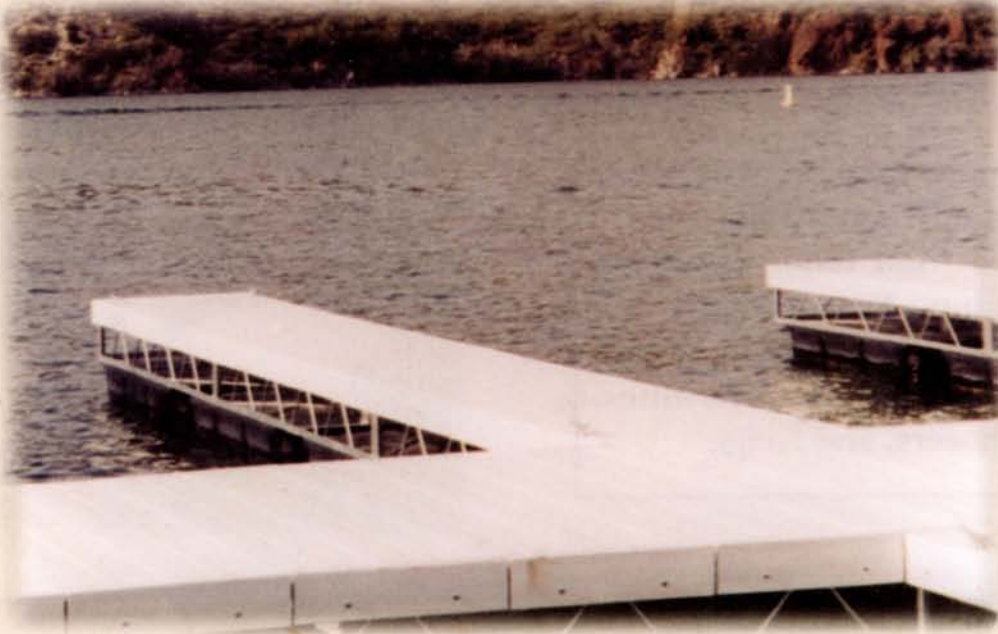

FiberForce™ is an excellent choice for retaining walls, fencing, boardwalks, and many marine applications.

# Fiber Force™

Traditional wood working tools can be used with FiberForce™. It is available in ten UV protected colors and sizes and lengths similar to wood.
